

## **1. Difference between visibility:hidden and display:none?**

**Ans:**

**visibility: hidden;:**

- Hidden element still occupies space.
- Hidden element is not visible but still affects layout.
- Hidden element can still interact with other elements.

**display: none;:**

- Hidden element does not occupy space.
- Hidden element is completely removed from the layout.
- Hidden element does not interact with other elements.

## **2. Difference between inline and block level elements?**

- **Ans: Block-level elements:**

- Start on a new line.
- Occupy the full width available to them by default.
- Can contain other block-level and inline elements.
- Create a line break before and after them by default.

**Inline elements:**

- Do not start on a new line.
- Occupy only as much width as necessary.
- Cannot contain block-level elements but can contain other inline elements.
- Do not create a line break before or after them by default.
